

Information about a project financed from Norway Grants “Prevention of Consequences of Diseases and Health Problems in Paediatric Age at University Hospital Ostrava”

Information as of 7th April 2017

Realization of the project shall be terminated on 30th April 2017, based upon the approved change in the project schedule. The adjusted time schedule is being fulfilled, and almost all activities of the project have been accomplished, the last remaining activity being the supply of equipment for individual workplaces of the complex rehabilitation department. Within the activity of education, new educational tools and aids have been created, intended for education of parents of the youngest patients. Specifically, these include information brochures and DVDs, describing the procedures and correct techniques for determining and solving of problems in young children, namely in the area of hearing, sight and the neck, but also correct techniques of breastfeeding, feeding, speech therapy and care for a new-born at risk. These materials are available for parents of paediatric patients at respective FNO departments. Inevitable part of the activity of education was the participation of hospital employees at educational courses held outside of FNO, and also organising own educational events for the hospital staff and also external participants.

At present, the realization of individual project activities suggests that all project activities shall be duly performed and the aims of the project will be met.

More detailed information concerning certain project activities may be found on the previous page in the project documentation.
